Abstracts

Noise Control Systems are noise-prevention systems that help reduce the noise level from mining machines. Rise in mechanization has resulted in an increase in noise levels, leading to high noise levels in underground and open pit mines and mineral processing plants. The management of noise from mining operations is acknowledged as a fundamental responsibility of the mining industry. Applying a noise management system that comprises noise surveys, day and night noise mitigation, and some level of noise monitoring is the primary function required to meet environmental impact standard in most locations.
