## Abstracts

Non-anticoagulant rodenticides, including bromethalin, cholecalciferol, and zinc phosphide, are US EPA-registered and frequently used in controlling pest rodent populations. The potency of these rodenticides is highly variable, with rodent mortalities typically occurring on the order of several hours to days following ingestion of a lethal dose. These rodenticides belong to three different chemical classes that differ from one another as well as the anticoagulants in their mode of action, or anatomical change leading to rodent death.
