Abstracts

An active grille shutter system is part of a range of products that improve vehicle aerodynamics while generating significant energy savings. Active Grille shutters are designed for extreme air-flow conditions (10 % of driving conditions): the active grille shutter system opens the radiator air inlet at the front of the vehicle when the air conditioning is at the highest setting and helps improve the aerodynamic drag coefficient by an average of 9%. When closed, they halve engine warm-up times in very cold weather.
