Abstracts

The special CPU for notebook computers is called Mobile CPU (Mobile CPU). It not only pursues performance, but also low calorie and low power consumption. The earliest notebook computers directly use the CPU of desktop computers. However, with the increase of the main frequency of CPU, the narrow space of notebook computers can not quickly distribute the heat generated by CPU, as well as notebook computers. Batteries can't afford the huge power consumption of desktop CPUs, so mobile CPUs specially designed for notebooks began to appear. The manufacturing process of mobile CPUs is often more advanced than that of contemporary desktop CPUs, because power management technologies not available in desktop CPUs will be integrated in mobile CPUs, and higher micron accuracy will be adopted first.
