Nucleotides are conditionally essential nutrients that are one of the structural component or building block of ribonucleic acid (RNA) and deoxyribonucleic acid (DNA). Nucleotide is consist of a molecule of sugar and one of phosphoric acid plus a base (one of four chemicals: guanine, adenine, cytosine, and thymine). Premix is usually referred to a product or substance that is mixed in an early stage in the manufacturing process. Premixes are used to enrich products and enhance product formula. Nucleotide premixes are the customized blend of nucleotides and other nutrients that are used in the food and beverages fortification.
