A nucleotide is a component of deoxyribonucleic acid (DNA) and ribonucleic acid (RNA). It is made up of a base and a sugar and phosphoric acid molecule. Each of the structural elements or the ribonucleic building block acid and deoxyribonucleic acid requires a nucleotide. Furthermore, nucleotides serve as the foundation for another molecule, such as adenosine triphosphate, which is the primary energy cell. Nucleotide is also found in cyclic adenosine monophosphate. Many chemical reactions that play a role in metabolism use nucleotide or nucleotide premix.
