## Abstracts

OCA optical adhesive film is an optical grade pressure-sensitive adhesive film product used for bonding transparent optical devices (such as touch screen, display screen, glass cover, flexible cover, etc.), with high cleanliness and high light transmittance, low haze, various dielectric constants, high adhesion, no yellowing, no crystal points, no bubbles, water resistance, high temperature resistance, UV resistance, etc. There are two types of optical adhesives and optical adhesives with substrates, which are divided into two categories: full curing (non-UV type) and semi-curing (UV type) according to whether UV curing is required. Mainly used in the bonding and assembly of touch display modules such as LCD and AMOLED. At present, the mainstream touch smart terminal products all adopt the OCA optical film fully-fitted screen technology, which effectively ensures the brightness, contrast, clarity and touch fluency of the display screen.
