Abstracts

The off-road vehicle xenon lamp refers to a high-pressure gas discharge lamp filled with an inert gas mixture including xenon, without the filament of a halogen lamp, referred to as a xenon lamp, and can be called a metal halide lamp or a xenon lamp. The off-road vehicle xenon lamp replaces the traditional tungsten wire with high-pressure xenon gas wrapped in a quartz tube, providing higher color temperature and more concentrated lighting. Since the xenon lamp is a beam of arc light formed by activating xenon gas with high voltage current, it can continuously discharge and emit light between the two electrodes. The power of ordinary car tungsten bulbs reaches 55 watts, while the xenon lamps only need 35 watts, which is reduced by nearly half. Xenon lamps can significantly reduce the burden on the vehicle's electrical system. The color temperature of xenon lamps is between 4000K and 6000K, which is much higher than that of ordinary car headlight bulbs. It has high brightness. The light color of the 4300K ??xenon lamp is white and yellowish. Due to the low color temperature, the visual effect is yellowish, and the penetrating power of the light is stronger than that of the high color temperature lamp, which can improve the driving safety at night and in foggy weather.
