Abstracts

When small oil leaks and spills happen, they are often hard to detect. And it imperils drinking water, devastates natural resources and also damages the reputation of the enterprise and makes the enterprise suffer economic losses.

The oil film detector uses laser, reflection, impedance and other methods to detect the floating oil film on water surfaces in drainage ditches, pits, oil water separating tanks, purification plant water inlets, etc., and generate an alarm. It will detect a slight amount of oil films on the water surface from marine diesel to vegetable oil, and to silicon-based oil, not limited to detection of just hydrocarbon oils.
