## Abstracts

There are two infrastructure options for a 5G network, non-standalone (NSA) and standalone infrastructures. A non-standalone infrastructure relies partly on existing 4G LTE infrastructure and brings some new technology like 5G New Radio (NR). Standalone (SA) infrastructure refers to a 5G network that does not rely on LTE networks and has its own cloud-native network core that connects to the NR. It is expected that network carriers will arrive at a standalone infrastructure after moving through an NSA infrastructure.
