Abstracts

Cleaning of hydrocarbon tanks allows for full and safe access of tanks for inspection and maintenance purposes. It increases the dynamics of operational safety at the storage location. In order to maximize the lifetime or total service life of a tank, sufficient maintenance should be undertaken to counteract degradation mechanism such as corrosion or deposition. Cleaning of the tank is recommended even when one decides to change its storage content, so as to prevent the mixing of one content with another. Cleaning plays an important role in the maintenance of tank and it potentially helps in increasing the service life of the tank; however, it requires the tank to be out of commission for a certain period of time. Moreover, the cleaning process in itself can be a potentially hazardous procedure both for the environment and human life.
