## Abstracts

The online fraud detection (OFD) market is composed of vendors that provide products or services that help an organization detect fraud that occurs over the web, mobile or other telephony channels (i.e., call center, interactive voice recognition [IVR]) by performing one or both of these functions: Running background processes that are transparent to users. Corroborating a user's identity. OFD vendors detect online fraud as transactions and interactions occur, in real time or near-real time. They provide solutions for web, mobile or telephony channels. As the sophistication of attacks continues to evolve, so too have the tools, technologies and strategies that detect and prevent fraudulent activity.
