## Abstracts

Polypeptide and protein drugs refer to the biological drugs of polypeptide and protein substances used for prevention, treatment and diagnosis. Polypeptide is a compound formed by linking  $\alpha$ -amino acids together with a peptide chain, and it is also an intermediate product of proteolysis. N polypeptide chains are entangled in a certain spatial structure to form a protein. The hydrolysis of macromolecular proteins produces polypeptides. Such drugs are biochemical preparations and have relatively strict requirements on storage and transportation environment. The Oral Proteins and Peptides industry can be broken down into several segments, Linaclotide, Insulin, Plecanatide, Cyclosporine, Octreotide, etc. Across the world, the major players cover Ironwood & Allergan (AbbVie), Novo Nordisk, Synergy Pharmaceuticals (Salix), Novartis, Chiasma (Amryt Pharma), etc.
