Abstracts

Organic pigment is a cyclic organic compound which consists of hydrocarbon. Organic pigments clear shade and high color-strength. There are lots of slight differences from every manufacturer in Shade, Transparency, Color-strength and Clearness depending on its micronization technology, i.e. chemical structures and crystalline structures. Comparing with Inorganic pigment, the hiding power, light-fastness, solvent-resistance and heat-resistance of organic pigments are poorer but color-strength is much higher, shade is brighter and more colors are available.
