Abstracts

Orthopedic prosthetics refer to the field concerned with the identification, designing, production, and fitting custom-made artificial limbs in patient with a missing part of limb lost through disease, trauma, or a congenital condition. These custom-made orthopedic prosthetics require a combination of low weight and very high strength. Therefore, materials such as Kevlar, carbon fiber, and titanium are commonly used for production. Vast advances in the field of CAD/CAM technology and material science have helped the global market orthopedic prosthetics develop at an encouraging pace in the past few years.
