Abstracts

Osteoarthritis is the most common form of arthritis, affecting millions of people worldwide. It occurs when the protective cartilage that cushions the ends of bones wears down over time. Although osteoarthritis can damage any joint, the disorder most commonly affects joints in hands, knees, hips and spine. Common treatment methods don't change the progression of osteoarthritis. However, two nutritional supplements -- glucosamine and chondroitin sulfates -- have been studied to determine if they can relieve pain or perhaps slow the breakdown of cartilage, which is a significant part of osteoarthritis. There is evidence that certain foods and nutrients can improve the symptoms of osteoarthritis. They do this by fighting inflammation, providing nutrition, and boosting bone, muscle, and immune system function.
