Palmitoylethanolamide (PEA), also known as palmitamide ethanol, is an endogenous fatty acid amide, belonging to the class of nuclear transcription factor agonizers. PEA has been shown to bind to a nuclear receptor (nuclear receptor) that affects a variety of biological functions related to chronic pain and inflammation, and is a natural anti-inflammatory agent [3]. The main target of hexadecamide is thought to be peroxisome proliferation-activated receptor alpha (PPAR- alpha).
