Abstracts

A panel air conditioner is used to maintain the temperature and humidity of control panels of several machines and cabinets such as battery cabinet, power cabinet, and telecommunication cabinet. Panel air conditioners consist of two independent air outlets - the internal outlet circulates the cool air on the electronic panel and cabinets, and the external outlet dissipates extracted hot air into the atmosphere. The machine has a wide range of cooling capacity. Panel air conditioners are used in several industries such as food processing, chemical, pharmaceutical, telecom, and manufacturing. Panel air conditioners are likely to see significant increase in demand during the forecast period.
