Abstracts

Carrier Tape is a supplementary product for the electronic packaging industry. The tapes are mainly used as protective packages for electronic components, integrated circuits, and other devices. The tape serves as not only a package but also a protecting layer that prevents electronic devices from physical and electrostatic discharge damages during outbound shipping and inbound storage.

Carrier Tape is mainly used by electronic components such as integrated circuits, resistor, capacitor, transistor, etc. During the packaging process, electronic devices are packed in a specially designed cavity on the tape. The carrier tape is then enclosed by a top and a bottom cover tape which then stores the tape in a reel. In that way, the entire structure prevents electronic devices from being polluted during transportation and storage. When the tape arrives at factories or assembly lines, automatic machines pull out electronic devices by locating the round sprocket holes on the tape. This report studies the Paper Carrier Tape market.
