Abstracts

A barrier coating forms an insulating and physical barrier, thus stopping the contact of corrosive elements with the substrate. The demand for sustainable paper and paperboard packaging has increased dramatically in recent years because consumers have become more mindful of the effects their buying choices have on the environment. This trend has put significant pressure on paper and paperboard packaging producers to eliminate their use of barrier coatings that employ polyethylene, paraffin-based waxes, silicones and fluorochemicals and to switch to using more environmentally friendly barrier coatings, especially in food and beverage packaging applications.
