## Abstracts

Particle Size Analyzer is an analytical technique by which the distribution of sizes in a sample of solid or liquid particulate material is measured and reported. Particle size analysis is an important tool in characterizing a wide range of final-product performance factors.

Numerous analytical techniques and approaches exist for particle size analysis. Particle size analyzers range from the historical sieve to modern automated light scattering instruments. The most appropriate selection for a particular application depends on a number of factors including the size range of interest, nature of the sample, the information required from the analysis, the analytical method, and sample throughput. The particle size can have considerable importance in a number of industries including the chemical, mining, forestry, agriculture, nutrition, pharmaceutical, energy, and aggregate industries.
