Abstracts

The increase in demand for concrete superplasticizers can be attributed to the increase in concrete consumption worldwide. Most of the specific demand comes from emerging economies in the Asia-Pacific region. Compared with similar products, PC-based superplasticizers can achieve water reduction rates of up to 40.0% at extremely low dose rates. The excellent water reducing ability and dispersibility are expected to drive the demand for PC-based concrete superplasticizers in the next five years.

Polycarboxylic acid superplasticizer is used as high-range superplasticizer in high-performance concrete, high-strength concrete, high fly ash / slag concrete, cement grout and dry powder mortar. Therefore, the PC segment will be the fastest growing segment.
