A retimer is a digital and analog device. It receives the signal and extracts the digital part of it, then it regenerates it as a separately trained link, in both directions. Therefore, the noise (and other imperfections such as jitter), that was originally present, will be eliminated, it is like a fresh start from the re-generated signal. This report studies PCIe retimer and USB retimer, which includes PCIe 4.0/5.0/6.0 retimer and USB 3.0/3.1/3.2/4.0 retimer.
