Abstracts

Peptides are synthesized by coupling the carboxyl group of one amino acid to the amino group of another amino acid molecule. Due to the possibility of unintended reactions, protecting groups are common necessary. Chemical peptide synthesis most commonly starts at the carboxyl end of the peptide, and thus progress toward the amino-terminus. This is the opposite direction of protein biosynthesis.

A contract development and manufacturing company (CDMO) is a company within the pharmaceutical industry that provides drug development and manufacturing services. Pharmaceutical companies partner with CDMOs as a way to outsource drug development and drug manufacturing.

CDMO peptides production via contract peptide manufacturing is to optimize process development and achieve highly efficient conversion at every amino acid coupling to produce a high-purity crude synthetic custom peptide and minimize the demands on downstream processing.
