Laser, radar and camera-based sensing system is an indispensable part of the whole set of sensing technology for the operation of the autopilot system. The camera-based sensing system supports autopilot for emergency braking, adaptive cruise control, and Lane departure warning system, which are already in many passenger cars. In the Self Driving Vehicle Assembly, the camera will be coupled with other sensing technologies designed to provide a detailed 3D pictorial representation of the vehicle's surroundings. While the radar can detect the relative position and speed of the target, the Lidar can generate the 3d map of the target, and the sensor system based on the camera can use the rich visual information to complete the picture.
