Abstracts

Personal cooling systems (PCS) are used by first responders to maintain normal body temperature when working in high-temperature environments. Personal cooling systems can be active or passive and comprise a cooling technology and a garment, usually a vest. Active devices usually involve a circulating fluid, e.g., air or chilled water, and require a power source. Passive systems have no moving parts and do not require a power source. They provide cooling only for a limited time and are fairly inexpensive.
