Abstracts

Orthopedic implants are a general term for implants that are replaced, repaired, supplemented, and filled by human bones. They are used for the maintenance, support, and repair of human bones, and are currently the most commonly used orthopedic medical materials in clinical practice. Because the shape of each person's bones is different under the influence of acquired behaviors, personalized orthopedic implants are customized according to the bone shape of different patients, to enhance their fit.

This report contains market size and forecasts of Personalized Orthopaedic Implant in global, including the following market information:
