Abstracts

PET moulding machines are made to manufacture a large number of bottles, i.e. a minimum of 30,000 bottles/hour. Because of the inherent quality, these machines are largely used by manufacturers who generally require large-scale output. However, if these machines are forced to be used for a smaller volume output then manufacturers would not be able to fetch the profit they expect. The small scale industries operating in rural regions can't consume such high volumes of the product thus forcing the market to produce machines that can handle smaller volumes in a single run with economic rates.
