Abstracts

Pharmaceutical Glass has a broad range of containers, including injectable, transfusion, diagnostic and syrup bottles, and offers a choice of glass type (I, II, III) and colour (clear or amber). Glass packaging keeps the products safe and uncontaminated for longer periods as glass does not react with several consumable and non-consumable items. Glass is widely known for its recyclability and reuse, making it the best packaging material for pharmaceuticals. It offers several beneficial properties such as sterility, chemical inertness, malleability, and water resistance, making it more appropriate for packaging a wide variety of products in the pharmaceutical industry. A container for pharmaceutical use is an article which holds or is intended to contain and protect a drug and is or may be in direct contact with it. The closure is a part of the container. The container and its closure must not interact physically or chemically with the substance within in any way that would alter its quality.
