Abstracts

Pharmaceutical grade gelatin is colorless, water soluble, translucent, and a delicate element that has a high molecular weight. It is derived from skin, white connective tissues, and bones of animals by partial hydrolysis of collagen. Gelatin is harmless and absorbable, which is why it is employed in various pharmaceutical applications. It is used as a suspending agent (assists in maintaining the stability of pharmaceutical suspensions) and in manufacturing capsules. In addition, gelatin serves as a rich source of protein and is also used as a plasma substitute.
