Abstracts

Many R&D or production processes handle highly active pharmaceutical compounds, very toxic chemicals, or Nano sized material, which have the possibility of causing harmful effects on the human body and surrounding environment. To reduce exposure risk by scattering hazardous or toxic materials, a handling facility or system are required to be placed in an isolated area and operators are required to put on Personal Protective Equipment (PPE), dust masks, gloves and suits. In such cases the work environment becomes poor, and operators are still exposed to the hazardous surroundings. Introduction of isolators or glove boxes into such processes enables perfect containment of hazardous and toxic materials and keeps the scattering risk to operators and the environment at a minimum level, thus resulting in prevention of contamination of the product and improvement of the working environment and reduction of overall cost of the facility and its management.
