Epoxy resin is one of the most widely used matrix resins in polymer matrix composites, but it is a flammable substance. Phosphorus-containing epoxy resins can improve the flame retardant properties of epoxy resins by adding phosphorus-containing flame retardants. Compared with halogen-containing flame retardants, phosphorus-based flame retardants have the properties of less smoke, low toxicity, and low heat release. According to their composition and structure, phosphorus-based flame retardants can be divided into organic and inorganic phosphorus-based flame retardants.
