Abstracts

PVDF (polyvinylidene fluoride) is a fluorine-containing chemical with various excellent characteristics such as corrosion resistance, high temperature resistance, high mechanical strength and high electric breakdown strength; PVDF is mainly used in photovoltaic for photovoltaic backsheets. PVDF film (polyvinylidene fluoride film) for photovoltaic is a film with excellent weather resistance, mainly used as the outermost material of solar backsheets, protecting the solar cell module from the influence of external environmental changes, while playing the effect of anti-pollution, anti-UV, etc., so that the solar cell module remains in the best condition. PVDF film is mainly blow molded, cast two kinds of hot melt processing, you can adjust the gap of the mouth mold of the equipment to adjust the thickness; the mainstream PVDF film thickness on the market are 20, 22.5, 25, 30 μ m and other thicknesses.
