## Abstracts

The alternative names for the phthalocyanine blue are phthalo blue or monastral blue. It is mainly used as a pigment. Owing to its bright blue color it is widely being used in the paints and dyes. It is very helpful owing to its advanced qualities such as tinting strength, resistance, light fastness, and the ability to cover up the effects of the acids and alkalis. It does not dissolve in water and various other solvents. It is on the crystal modification that the tint of the blue shade of the phthalocyanine blue depends upon.
