Pipe Conveyors are as the name implies the belt is wrapped into a cylindrical pipe form, guided by six hexagonally arranged idlers along the conveyor route. This allows the conveyor to negotiate inclines of upto 30 deg. and curve in both, the vertical and the horizontal directions, enabling it to negotiate obstacles that would obstruct a conventional straight conveyor. With the product completely enclosed within the belt pipe, spillage is eliminated along the conveyor run on both the carrying and the return side.
