Abstracts

Fiber obtained by spinning PHBV and PLA, a copolymer of 3-hydroxy-butyrate (HB) and 3-hydroxy-valerate (?HV) as raw materials. Based on reactive blending, a new biobased chemical fiber with polyhydroxybutyrate hydroxyvalerate (PHBV) and polylactic acid (PLA) as main components was developed by melt spinning, which not only effectively overcome the PLA fiber's performance defects such as poor heat resistance and hard hand feeling, but also obtained the luster and hand feeling similar to the real silk
