Abstracts

Planar Inverted F Antenna (PIFA) typically made up of a rectangular planar element located above a ground plane, a short circuiting plate or pin, and a feeding mechanism for the planar element. The inverted F antenna is a variant of the monopole where the top section has been folded down so as to be parallel with the ground plane. This is done to reduce the height of the antenna, while maintaining a resonant trace length. PIFA can be considered as a kind of linear inverted F antenna (IFA) with the wire radiator element replaced by a plate to expand the bandwidth. The shape of the antenna appears like an inverted F, and hence named Planar Inverted F Antenna (PIFA).
