Plasma generators are capable of creating plasma which is utilized to alter the characteristics of surfaces. Plasma is formed inside plasma generators by creating a vacuum inside a chamber. Then a very small amount of gas is channeled into the chamber that changes phases from gas to plasma when its molecules become ionized. Inside the chamber of plasma generators, surfaces get bombarded by plasma ions modifying the surface on a very small scale. These plasma processes usually change the surface by enhancing their adhesion capabilities and getting rid of any impurities the surface may have had.
