Abstracts

Plasma lighting systems are electrodeless metal halide lamps that produce light directly from an arc discharge operated under high pressure. The arc discharge is powered by a high-frequency electromagnetic field generated externally to the lamp. This is different from conventional high-intensity discharge (HID) lamps which have electrodes within the arc tube that convey current to sustain the arc discharge.

This report contains market size and forecasts of Plasma Lighting in global, including the following market information:

Global Plasma Lighting Market Revenue, 2017-2022, 2023-2028, ($ millions)
