## Abstracts

Plastics can be an electric conductor and also an insulator. Thermoplastics polymer can be produced in various shapes and designs as per the requirement of electric vehicles due to the high versatility and easy moldability of plastics. The use of plastics for electric vehicles reduces the weight of these vehicles, which provides a greater range between recharges. Plastics offer excellent heat resistance that enables the construction of battery compartments and cooling systems and do not hamper the durability and safety provided by electric vehicles.
