Abstracts

A smartcard is a typical plastic chip card that contains an embedded computer chip which is either a memory or a microprocessor type. The data that the chip is responsible for storing and transacting pertains to either value, information or a combination of both. This data is stored and processed both within the card's chip. The card data is transacted via a reader which is a component of the computing system. Several systems across a wide range of commercial sectors, like banking, healthcare, finance, entertainment, and media nowadays use smartcards in their applications. Applications using smartcard benefit from the several security features that these chip cards provide. The efficiency of the systems is elevated to a large extent due to the smartcards.
