Abstracts

Polymers & plastics are some of the most important and most widely used chemical products in industry and consumer markets. Polymers /plastics are produced by chemically linking one or more “link” chemicals to produce long chains of strongly connected chemicals called polymers. They are used for manufacturing consumer products, such as coatings, lubricants, consumer goods, aerospace, building materials etc. Polymers and plastics are being used as an alternative to traditional metal or mineral based products due to their cost-effectiveness, high performance and low weight.
