PMMA IOL is a special lens made of synthetic materials. Its components include silica gel, polymethyl methacrylate, hydrogel and so on. The shape and function of PMMA IOL are similar to the lens of the human eye, with light weight, high optical performance, no antigenicity, inflammatory, carcinogenic and biodegradable properties. After cataract surgery, the cloudy lens was removed, and PMMA IOL was implanted in the eye to replace the original lens, so that the external object could be focused on the retina and the surrounding scene could be seen clearly.
