Abstracts

A polarization insensitive fiber optical circulator is a unidirectional fiber optic device that routes incoming light waves from any port to the next port and sends the rejected portion of the light wave to the third port instead of the first port. Features high isolation, low insertion loss, low polarization dependent loss (PDL) and various other notable features. It is the perfect solution for add/drop filters, Erbium-Doped Fiber Amplifiers (EDFA), dispersion compensation, bidirectional communication and fiber optic sensor applications.
