PLA plastic or polylactic acid is a vegetable-based plastic material, which commonly uses cornstarch as a raw material. The monomer is usually made from fermented plant starch. This material is a thermoplastic aliphatic polyester and it is the primary natural raw material used in 3D printing. PLA is a fully biodegradable thermoplastic polymer consisting of renewable raw materials. Among all 3D printing materials, PLA is part of the most popular materials used for additive manufacturing for filament fabrication. It's easy to use, safe, affordable, and it has outstanding material properties. You can use PLA filament for a wide range of applications and it comes in an equally diverse range of composites and colors. PLA filament is a thermoplastic polymer made strictly from renewable resources. Poly Lactic Acid (PLA), is generated from biodegradable material like cornstarch, potato starch, sugarcane and tapioca roots, and has a smooth, shiny appearance.
