## Abstracts

Micro injection molding, as the name suggests, is a molding process which requires a specific molding machine with high injection pressure and speed, precise shot control, and ultra fine resolution for molding small sized tools and parts. This technique is used for the development of small or micro products that require precise specifications. Micro injection molding is usually done for the parts that are designed with weight less than a milligram and size less than 1mm. Use of this technique is not limited to only small parts but may be used for large products which require micro sized features such as thickness, diameter hole, etc.
