Abstracts

Increasing applications of water-soluble packaging in multiple industries, and growing concerns about the environment and sustainability, have led to a surge in demand for biodegradable packaging. Increased awareness of the disadvantages of using disposable plastics and government intervention in banning the use of such plastics, which have an adverse impact on the environment, have contributed significantly to the growth of the water-soluble packaging market. This is due to the increased use of water-soluble packaging, which provides a sustainable and environmentally-friendly solution for packaging for multiple applications. PVOH (polyvinyl alcohol) is a transparent, water-soluble thermoplastic derived from polyvinyl acetate. It is extremely hydrophilic in nature and is therefore an ideal raw material for making water-soluble films and packaging. In addition, the use of water-soluble packaging made of PVOH has become widespread in the agricultural sector to cover harmful fertilizers, making it easier for farmers to handle such toxic chemicals without contacting them.
