Abstracts

The polymerase chain reaction (PCR) is a method widely used to rapidly make millions to billions of copies (complete or partial) of a specific DNA sample, allowing scientists to take a very small sample of DNA and amplify it (or a part of it) to a large enough amount to study in detail.

PCR Amplification Equipment is an instrument for amplification of specific DNA using PCR(Polymerase chain reaction) technology. It is widely used in medical and biological laboratories. For example, it is used for the identification of genetic diseases, diagnosis of infectious diseases, gene replication and paternity identification.
