Abstracts

Polypill is a fixed dose drug combination used in the treatment of various chronic diseases. This combination pharmacotherapy offers the potential to decrease the incidence and prevalence of cardiovascular and other diseases. Polypill improves patient compliance, thereby increasing the adoption of these products. This is likely to boost the growth of the global polypill products market. Moreover, ease of dosage understanding for elderly patients and increase in usage of polypill products are the major advantages offered by polypill products over other formulations. Combination therapy is more effective than a single substance with an acceptable safety profile.
