Polyvinylidene Fluoride (PVDF) pipe, also known as Kynar®, is used in chemical and industrial applications requiring excellent chemical resistance and/or higher temperatures. Of all the commonly used piping systems, PVDF is the most chemically resistant, handles the highest temperature (up to 275°F) and has the lowest flame and smoke development characteristics. It is typically joined by heat fusion and is used for applications involving chemicals, nuclear waste, food and pharmaceutical processing and ultra high purity water systems.
